
EEP Auto-Grading Platform

Administrator Guide

E-Yantra Summer Internship Program (EYSIP)

This guide covers **platform-wide administration**:
user management, assignment oversight, system health,
platform configuration, and security operations.

Document Version: 1.0

Platform Version: v2.0

Audience: Platform Administrators (ADMIN role)

Organisation: E-Yantra, IIT Bombay

Last updated: July 1, 2026

7.2	Rotating the Proof Signing Key	5
7.3	Resetting a Student Password	6
8	Quick Reference	6

1 Overview

The **Admin** role has full platform-wide access. Admins can:

- View and manage **all students and mentors** on the platform
- Create new **mentor/admin accounts**
- Override **assignment restrictions** (publish any assignment, modify deadlines)
- View **all submissions** and grading sessions across the entire platform
- Access **system health** metrics (database, Redis, worker status)
- Manage **platform configuration** via environment variables
- Perform **security operations** (reset passwords, deactivate accounts)

Admin Responsibility

The admin account has unrestricted access. Protect credentials carefully. The default admin password is the email address – change it immediately after first deployment.

2 Admin Dashboard

Login with the admin account. The admin dashboard shows platform-wide stats:

Widget	Scope
Total Students	All students registered on the platform
Total Mentors	All mentor accounts
Total Submissions	All submissions across all assignments
Active Sessions	Submissions currently being processed
System Health	Database and Redis connectivity status

3 User Management

3.1 Viewing All Students

1. Navigate to **Users** → **Students** in the sidebar.
2. You can see all registered students with their roll number, email, active status, and registration date.
3. Use the search field to filter by roll number or name.

3.2 Viewing All Mentors

1. Navigate to **Users** → **Mentors**.
2. Displays all mentor accounts with their role (MENTOR or ADMIN).

3.3 Creating a Mentor Account

Step 1 Navigate to **Users** → **Mentors**

Step 2 Click + Create Mentor

Fill in the following fields:

Field	Description
Username	The mentor's login username (typically their email)
Full Name	Mentor's display name
Email	Email address (must be unique)
Password	Initial password. Communicate this securely to the mentor.
Role	mentor for a regular mentor, admin for an administrator

Step 3 Click Create

- The account is active immediately.

Warning

Communicate the initial password to the mentor via a secure channel (not plain email). Ask them to change it on first login.

3.4 Deactivating Accounts

To deactivate a student or mentor account (blocking login without deleting data):

1. Locate the user in the Users list.
2. Toggle the **Active** switch to off.
3. The user will receive a 401 Unauthorized on their next login attempt.

4 Assignment Management (Admin)

As an admin you have *no ownership restrictions* on assignments.

4.1 Viewing All Assignments

Navigate to **Assignments** → **All Assignments** (admin view). This shows all assignments regardless of published/unpublished/archived status.

4.2 Admin Update (Full Override)

Use the admin assignment update endpoint to modify *any* field on *any* assignment:

```
PATCH /api/v1/assignments/admin/{assignment_id}

Body (all fields optional):
{
  "title": "Updated Title",
  "description": "New description",
  "max_score": 100,
  "deadline": "2025-12-31T23:59:59",
  "is_published": true,
  "is_archived": false,
  "late_penalty_pct": 10,
  "resource_links": ["https://example.com/resource"]
}
```

Admin Tip

Unlike mentor updates, the admin update has **no deadline lock**. You can extend deadlines even after they have passed.

4.3 Archiving / Deleting Assignments

Assignments are never hard-deleted. Use the admin archive endpoint:

```
DELETE /api/v1/assignments/admin/{assignment_id}
```

This sets `is_archived = true`, hiding the assignment from all views while preserving all submissions and results.

5 Submission & Session Oversight

5.1 All Submissions

Navigate to **Results** → **All Submissions**. Admins see submissions across all mentors' assignments.

API Endpoint	Purpose
GET /api/v1/admin/submissions	All submissions, any assignment
GET /api/v1/admin/sessions	All grading sessions
GET /api/v1/admin/students	All students
GET /api/v1/admin/mentors	All mentor accounts

5.2 Grading Sessions

A *grading session* corresponds to a single submission's lifecycle through the grading pipeline. Sessions have the same status codes as submissions (see Student Guide, Section 5).

6 System Health

The platform exposes a health endpoint:

```
GET /health
```

Response example:

```
{
  "status": "ok",
  "database": "ok",
  "redis": "ok",
  "version": "2.0.0"
}
```

- **status:** "ok" – All systems operational
- **status:** "degraded" – One or more services down; check database/Redis
- Navigate to **Health** in the admin sidebar for a UI view of this data.

7 Security Operations

7.1 Rotating JWT Secret

1. Generate a new secret: `python -c "import secrets; print(secrets.token_hex(64))"`
2. Update `JWT_SECRET_KEY` in the Railway environment and EC2 `.env`.
3. Restart the API service. **All existing sessions will be invalidated** – users must log in again.

Critical

Rotating the JWT secret logs out every user simultaneously. Schedule this during off-hours and notify users in advance.

7.2 Rotating the Proof Signing Key

The `PROOF_SIGNING_KEY` is embedded in compiled grader binaries. Rotating it requires rebuilding and redistributing all grader binaries. Coordinate with the grading team before rotating this key.

7.3 Resetting a Student Password

Currently, password resets must be done via direct database update or by re-importing the student via CSV (which resets the password to their email). A self-service reset flow is not yet implemented.

```
# Connect to PostgreSQL and update a password hash
docker exec -it grading_postgres psql -U grading_user -d
    grading_db

-- In psql:
UPDATE student SET hashed_password = '<bcrypt_hash>'
WHERE roll_number = '2025CS001';
```

8 Quick Reference

Admin Quick Reference

Default admin login:	eyantrastaff@gmail.com
Default admin pass:	eyantrastaff@gmail.com (change immediately!)
Health endpoint:	GET /health
Admin submissions:	GET /api/v1/admin/submissions
Create mentor:	POST /api/v1/admin/mentors
Admin assignment edit:	PATCH /api/v1/assignments/admin/{id}
Archive assignment:	DELETE /api/v1/assignments/admin/{id}
API Docs:	/docs (DEBUG mode only)
