
EEP Auto-Grading Platform

Mentor Tutorial Guide

E-Yantra Summer Internship Program (EYSIP)

This guide covers everything a mentor needs to manage **classrooms, assignments, students, and analytics** on the EEP Auto-Grading Platform.

Document Version: 1.0

Platform Version: v2.0

Audience: Mentors & Teaching Assistants

Organisation: E-Yantra, IIT Bombay

Last updated: July 1, 2026

1 Overview

As a **Mentor** on the EEP Auto-Grading Platform you have elevated privileges to:

- Create and manage **Classrooms** and enrol students
- Create, publish, and update **Assignments**
- Import students in bulk via **CSV upload**
- Monitor **submission queues** and grading sessions
- View detailed **analytics** and score distributions for your assignments
- Export **results** and download grade reports
- Post **Announcements** to your students
- Manage **evaluator sessions** for special evaluation scenarios

Mentor vs Admin

Mentors can only see and modify resources they *own* (their classrooms and assignments). Admins have platform-wide access. See the Admin Guide for admin-exclusive features.

2 Logging In

Step 1 Open the Platform

Navigate to the platform URL in your browser. Mentors use the same login page as students.

Step 2 Enter Your Credentials

- **Username:** Your email address (e.g., `mentor@iitb.ac.in`)
- **Password:** Set by the admin when your account was created, or your initial password.

Step 3 Confirm Your Role

After login you will be redirected to the **Mentor Dashboard** automatically. If you see a student dashboard instead, your role may not have been assigned correctly — contact the admin.

3 Mentor Dashboard

The dashboard gives you a high-level overview of your cohort:

Widget	Description
Total Students	Students who have submitted to your assignments
Completion Rate	% of submissions that reached a terminal state
Average Score	Mean score across all completed submissions
Total Submissions	Cumulative submission count for your assignments
Score Distribution	Bar chart of score bands (0–20, 21–40, . . . , 81–100)
Category Breakdown	Submissions by assignment category

4 Managing Classrooms

4.1 Creating a Classroom

Step 1 Navigate to Classrooms

Click **Classrooms** in the sidebar.

Step 2 Create New Classroom

1. Click **+ Create Classroom**.
2. Fill in:
 - **Name** – e.g., Batch A – 2025
 - **Description** – A short description of the cohort
3. Click **Create**.

4.2 Managing Enrollments

Students can self-enrol by joining your classroom code, or you can import them via CSV.

4.2.1 Approving Enrollment Requests

1. Open the classroom and go to the **Enrollments** tab.
2. Pending requests are shown with an **Approve / Reject** button.
3. Approved students gain full access to published assignments.

Warning

Students with *pending* enrollment cannot submit assignments. Approve enrollments promptly at the start of the program.

5 Importing Students via CSV

The most efficient way to onboard a batch of students is via CSV import.

5.1 Prepare the CSV File

The CSV must contain exactly these three columns (order does not matter, but headers are required):

```
full_name,email,roll_number
Jane Doe,jane@example.com,2025CS001
John Smith,john@example.com,2025CS002
```

- **roll_number** – Must be unique. Converted to uppercase automatically.
- **email** – Must be unique. Used as the student's default password.
- **full_name** – Displayed on all dashboards and reports.
- The file must be **UTF-8 encoded**.

5.2 Upload the CSV

Step 1 Go to your Classroom

Open the classroom you want to import students into.

Step 2 Import Students

1. Click **Import Students (CSV)**.
2. Select your **.csv** file.
3. The system processes each row:
 - **created** – New account created, enrolled in classroom (APPROVED automatically).
 - **already_exists** – Student already on the platform; enrollment is still added.
4. A summary table is shown after import.

Default Password

Imported students' default password is their **email address**. They are forced to change it on first login. Communicate this to your students.

6 Managing Assignments

6.1 Creating an Assignment

Step 1 Navigate to Assignments

Click **Assignments** in the sidebar and then **+ Create Assignment**.

Step 2 Fill in Assignment Details

Field	Description
Title	Short, descriptive name (e.g., <i>Week 1: Git & GitHub</i>)
Slug	URL-safe identifier (e.g., <code>week1-git</code>). Must be globally unique.
Description	Full task description shown to students. Supports plain text.
Category	One of: Git, Bash, Python, Docker, Web, ML, Other
Max Score	Maximum points for full completion
Deadline	Submission deadline (UTC). Cannot be changed after it passes without admin.
Late Penalty (%)	Deducted from score for submissions past the deadline (e.g., 20 = 20% off)
Submission Filename	Expected filename inside ZIP (e.g., <code>solution.sh</code>)
Submission Instructions	Step-by-step instructions for students
Expected Structure	File tree the ZIP must follow (one path per line)
Expected Media URL	Optional image/diagram URL showing expected output
Resource Links	URLs to learning resources (YouTube, docs, etc.)

Step 3 Save as Draft

Click **Create Assignment**. The assignment is saved as *unpublished* (draft). Students cannot see it yet.

6.2 Publishing an Assignment

Only the assignment's *creator* (or an admin) can publish it.

Step 1 Open the assignment

from your assignments list.

Step 2 Click Publish

- the assignment becomes visible to all enrolled students immediately.

ⓘ Before Publishing

Double-check the deadline, max score, and expected file structure before publishing. The deadline is **locked** after it has passed and requires admin intervention to extend.

6.3 Updating an Assignment

- Click **Edit** on the assignment detail page.
- You can update title, description, max score, and deadline (before the deadline passes).
- After deadline has passed, only an admin can extend the deadline.

6.4 Unpublishing an Assignment

If you need to pull an assignment (e.g., an error was found), click **Unpublish**. The assignment returns to draft state and students can no longer see it. **Existing submissions are preserved.**

7 Monitoring Submissions

7.1 Submission Queue View

Click **Submissions** in the sidebar. You will see all submissions across your assignments:

Column	Meaning
Student	Roll number and full name
Assignment	Assignment slug and title
Status	Current grading status (PENDING, RUNNING, COMPLETED, etc.)
Source Type	GitHub URL or ZIP upload
Attempt #	Which attempt number this is
Score	Final score (once grading completes)
Submitted At	Timestamp of submission

7.2 Results View

Click **Results** to see only completed submissions (COMPLETED, FAILED, VALIDATION_ERROR). This is your primary grading report view.

8 Analytics

The **Analytics** page provides insight into your cohort's performance.

- **Score Distribution** – How many students fall into each score band
- **Assignments Participation** – Submission counts per assignment slug
- **Category Breakdown** – Which categories (Bash, Python, etc.) are most submitted
- **Top Performers** – Students with highest average scores

Export Results

Use the **Export CSV** button on the Results page to download a spreadsheet of all scores for offline analysis or uploading to your institute's grade system.

9 Posting Announcements

Step 1 Navigate to Announcements

Click **Announcements** in the sidebar.

Step 2 Create New Announcement

1. Click **+ New Announcement**.
2. Set:
 - **Title** – Short headline
 - **Body** – Full announcement text
 - **Priority** – Normal or Urgent

3. Click **Post**.

Students will see the announcement in their Announcements feed and receive an in-platform notification.

10 Managing Students

Click **Students** in the sidebar to view all students who have submitted to your assignments.

Column	Meaning
Roll Number	Student's unique identifier
Full Name	Registered name
Email	Registered email
Assignments Participated	Number of distinct assignments with submissions
Sessions Count	Total submission count

11 Evaluator Sessions

For assignments that use external evaluator tools (e.g., EEP binary evaluators), you can start evaluator sessions from the **Evaluators** page.

- Go to **Evaluators** in the sidebar.
- Paste the evaluator shared key (provided by the admin).
- Start the evaluator session for a specific student and assignment.

Note

This feature is only needed for assignments that use the `.eep1` / `.eep2` proof-based evaluation scheme. Regular code submissions do not require this.

12 Quick Reference

Mentor Quick Reference

Login credential:	Email address
CSV columns:	<code>full_name</code> , <code>email</code> , <code>roll_number</code>
Default student pass:	Student's email address
Publish restriction:	Only assignment creator can publish
Deadline lock:	Cannot extend after passing (admin required)
Slug uniqueness:	Assignment slugs are globally unique
API Docs:	<code>/docs</code> (if enabled)
