
EEP Auto-Grading Platform

Student Tutorial Guide

E-Yantra Summer Internship Program (EYSIP)

This guide walks you through every step of using the **EEP Auto-Grading Platform** — from registration to viewing your final graded results.

Document Version: 1.0
Platform Version: v2.0
Audience: Students (EEP-2 Participants)
Organisation: E-Yantra, IIT Bombay

Last updated: July 1, 2026

1 Overview

The **EEP Auto-Grading Platform** (version 2.0) is a fully online, server-side project evaluation system built for the E-Yantra EEP Software Exploration Program. As a student you can:

- Browse and read published weekly assignments
- Submit your work via a **GitHub repository URL** or a **ZIP file upload**
- Watch real-time grading status via live updates
- View detailed results including scores, pass/fail status, and execution logs
- Attempt quizzes associated with each week's topic
- Track your overall progress on the student dashboard

How grading works

Your submission is executed inside an *isolated Docker sandbox* on our cloud server. The sandbox has **no internet access** and is destroyed after grading. Results are available within seconds to a few minutes depending on the task complexity.

2 Getting Started

2.1 Logging In

Step 1 Open the Platform

Navigate to the platform URL provided by your mentor or program coordinator in your web browser. The login page will be displayed.

Step 2 Enter Your Credentials

- **Roll Number / Email:** Your institute roll number (e.g., 20XXXXXX001) or registered email address.
- **Password:** For newly imported students, the *default password is your email address*. You will be prompted to change it immediately after first login.

Step 3 Change Your Password (First Login)

- On first login, the system enforces a mandatory password change.
- Choose a strong password (minimum 8 characters, mix of letters and numbers).

- Click **Update Password** to save.

Security

Do not share your credentials. The grading system logs all submission activity linked to your account.

2.2 Dashboard Overview

After login, you are taken to your **Student Dashboard**. Here you can see:

Widget	Description
Assignments	Count of published assignments available to you
Submissions	Your total submission count across all assignments
Passed	Number of assignments you have passed
Avg. Score	Your running average score across completed submissions
Recent Activity	Latest submissions with status badges

Note

If you see "**Classroom approval required**" on the dashboard, your enrollment is still pending. Contact your mentor to approve your classroom enrollment.

3 Browsing Assignments

Step 1 Navigate to Assignments

Click **Assignments** in the left-hand sidebar. You will see a list of all published weekly assignments.

Step 2 Open an Assignment

Click on any assignment card to open its detail page. The detail page contains:

- **Title & Description** – What the task is about
- **Category** – e.g., Git, Bash, Python, Docker
- **Max Score** – Points available for full completion
- **Deadline** – Due date/time (UTC)
- **Late Penalty** – Score deduction percentage applied past the deadline
- **Expected File Structure** – Required layout for your ZIP submission
- **Submission Instructions** – Specific instructions to follow
- **Resource Links** – Learning materials provided by your mentor

 Read before submitting

Always read the *Expected File Structure* carefully. Submissions that do not match the required layout will fail with a **VALIDATION_ERROR**.

4 Submitting Assignments

The platform supports two submission methods: **GitHub URL** and **ZIP Upload**.

4.1 Method A: GitHub Repository URL

Step 1 Prepare your repository

Ensure your repository is **public** on GitHub. Push all your final code before submitting.

Step 2 Copy the repository URL

Go to your GitHub repository and copy the HTTPS URL, e.g.:

```
https://github.com/your-username/week1-assignment
```

Step 3 Submit on the platform

1. On the assignment detail page, select **GitHub URL** as the source type.
2. Paste the repository URL in the input field.
3. Click **Submit**.

4.2 Method B: ZIP File Upload

Step 1 Package your work as a ZIP

- Compress your project folder into a single **.zip** file.
- Ensure the ZIP follows the *Expected File Structure* shown on the assignment page.
- Maximum file size: **50 KB** (50,000 bytes). Keep your ZIP lean — exclude binaries and build artifacts.

Step 2 Upload and submit

1. Select **ZIP Upload** as the source type.
2. Click **Choose File** and select your **.zip** archive.

3. Click **Submit**.

🚫 ZIP size limit

The maximum allowed ZIP size is **50,000 bytes (≈50 KB)**. Submissions exceeding this will be rejected immediately with a `FILE_TOO_LARGE` error. Do NOT include `node_modules`, `.git`, or compiled binaries in your ZIP.

4.3 Submission Rate Limiting

To prevent accidental double-submissions, the platform enforces a **5-second cooldown** between submissions for the same assignment. If you hit this limit, wait 5 seconds and try again.

4.4 Multiple Attempts

You may re-submit as many times as you wish before the deadline. Each submission is recorded with an **attempt number**. Your *latest* submission is typically used for final scoring, unless your mentor specifies otherwise.

5 Tracking Submission Status

After submitting, the platform updates you in real-time. The submission goes through the following states:

Status	Meaning
PENDING	Submission received, waiting to be queued
QUEUED	Added to the grading job queue
RUNNING	Grader is executing your code in the sandbox
COMPLETED	Grading finished successfully
FAILED	Grader ran but your code did not pass all tests
VALIDATION_ERROR	Submission rejected before grading (wrong format, etc.)
TIMEOUT	Your code exceeded the allowed execution time
CANCELLED	You manually cancelled the submission

ℹ Real-time Updates

The platform uses **Server-Sent Events (SSE)** to push live status updates to your browser. You do not need to refresh the page.

6 Viewing Results

Step 1 Go to Results

Click **Results** in the sidebar, or click on a completed submission card on the dashboard.

Step 2 Read the Result Detail

The result page shows:

- **Score** – Points earned (e.g., 80 / 100)
- **Passed** – Green tick for pass, red cross for fail
- **Attempt Number** – Which attempt this result belongs to
- **Execution Logs (stdout)** – Output your code produced
- **Error Logs (stderr)** – Any errors or warnings from the grader
- **AI Feedback** – Intelligent suggestions to improve your submission (where available)

✓ Passed!

If your status is **COMPLETED** and passed is **true**, your assignment is graded. Celebrate!

Step 3 Interpret a Failed Submission

1. Read the **stderr** output carefully — it often shows which test case failed and why.
2. Fix the issue in your code.
3. Re-submit before the deadline.

7 Quizzes

Each week may include a quiz to test your conceptual understanding.

Step 1 Navigate to Quizzes

Click **Quizzes** or find the quiz linked from the assignment page.

Step 2 Start the Quiz

- Quizzes are timed. A countdown timer is shown at the top.
- Questions may be multiple-choice (single or multiple answers) or short text.

- Once you start, the timer cannot be paused.

Step 3 Submit your Quiz

- Answer all questions and click **Submit Quiz**.
- Results are shown immediately after submission.

Quiz rules

- Do not refresh the page during a quiz – your progress may be lost.
- Quizzes can only be attempted once unless your mentor resets them.
- Each quiz has a fixed time window; once the deadline passes, you cannot start.

8 Announcements

Mentors post important notices in the **Announcements** section. You will receive in-platform notifications when a new announcement is posted.

- Click **Announcements** in the sidebar to view all notices.
- Read each announcement before making submissions – mentors sometimes clarify requirements or extend deadlines here.

9 Profile & Settings

- Click your name in the top-right corner and select **Profile**.
- You can update your **full name** and **email address**.
- To change your password, use the **Change Password** form on the profile page.

10 Common Issues & Solutions

Problem	Solution
"Classroom approval required"	Contact your mentor to approve your enrollment.
ZIP rejected (too large)	Remove <code>node_modules</code> , <code>.git</code> , compiled files.
VALIDATION_ERROR	Check the expected file structure on the assignment page.
TIMEOUT	Optimise your code. Avoid infinite loops.
GitHub URL not accepted	Ensure the repository is public .
Submission stuck in QUEUED	The grading worker may be busy. Wait a few minutes.
Login fails	Use your roll number (not email) as the username.

11 Quick Reference

Student Quick Reference

Login credential:	Roll number or email
Default password:	Your email address (change immediately)
Max ZIP size:	50,000 bytes ($\approx$ 50 KB)
Rate limit:	5 seconds between submissions
Sandbox network:	None (no internet inside grading container)
API Docs (debug):	/docs (if enabled by admin)
